

Muteeb Matloob

SENIOR SOFTWARE ENGINEER · AI & AGENTIC SYSTEMS

☎ +92 311 1080422 | ✉ muteebmatloobm@gmail.com | 🏠 muteeb.space | 🌐 muteebm | in muteebm

Summary

Senior Software Engineer and Team Lead with 6+ years of experience taking systems from monolith to event-driven microservices and, most recently, from scripted automation to autonomous LLM agents. At Sofy.ai I architected the Web Agent and the domain-specific agents behind the company's autonomous testing platform, exposed them through an MCP server, and led the Node.js/TypeScript microservices and Azure messaging that run underneath. I build with Python, Node.js, TypeScript, Angular/React and Azure, lead small teams, and care about shipping software that holds up in production.

Work Experience

Sofy.ai

Karachi, Pakistan (Remote)

SENIOR SOFTWARE ENGINEER – TEAM LEAD

July 2022 – Present

- **Sofy Web Agent** – Spearheaded the architecture and development of an autonomous LLM-powered system for intelligent web task automation:
 - Designed the agentic workflow with **Python**, **LangChain** and **Playwright**: semantic routing, dynamic tool calling and structured output parsing.
 - Pioneered **domain-specific agents** configured with deep business logic, dramatically reducing LLM hallucinations and improving decision accuracy on complex, domain-heavy tasks.
 - Developed and deployed an **MCP server** for the Web Agent, making its capabilities available to every compatible autonomous agent system.
- **Autonomous Testing Agents (2026 launch)** – Led the Web Agentic Framework and domain-specific agents behind Sofy's move from scripted automation to reasoning agents that understand applications, execute tests autonomously and self-heal as systems evolve, coordinated across web, mobile and ERP through a shared MCP hub.
- Architected the transition from a monolith to a **microservices** architecture using the **Strangler Fig pattern** with **Node.js** and **TypeScript**, improving modularity and reducing deployment times by an average of 80%.
- Implemented **Azure Service Bus** event-driven messaging, replacing legacy polling with a push-based mechanism that handles 100k+ daily events.
- Migrated core data modules to **MongoDB**, optimising retrieval performance and maintainability.
- Lead a cross-functional engineering team: sprint planning, technical design reviews, mentoring and rigorous **code review** and **TDD** standards across all microservices.

SOFTWARE ENGINEER

Sep 2020 – Jul 2022

- Led the front-end migration from **Angular 6** to **Angular 11**, improving code structure and UI performance.
- Built custom UI components and integrated state management, reducing reliance on third-party libraries.
- Built middleware APIs and microservices with **Node.js**, **TypeScript** and **Flask**, integrating **MS SQL** and **Redis** for caching and efficient data retrieval.
- Collaborated on sprint planning and conducted code reviews to ensure quality and alignment.

Skynners Private Limited

Karachi, Pakistan

CO-FOUNDER

2017 – 2020

- Architected and delivered **15+ custom software solutions** for enterprise clients, owning the full SDLC from requirements gathering to cloud deployment.
- Implemented scalable, event-driven backends in **Node.js** and **Python**, deployed on **AWS** via Docker, supporting high-traffic applications with 99.9% uptime.
- Pioneered internal CI/CD pipelines, reducing manual deployment errors by 80% and accelerating feature delivery across all client projects.
- **AAB** – Led end-to-end design and development of an in-house startup:
 - Built a cross-platform **React Native** app that acquired **1,000+ early users** within three months of launch.
 - Engineered an **Angular** admin portal and a high-throughput **Node.js/PostgreSQL** REST API on **Supabase**, processing thousands of daily transactions.
 - Presented the technical architecture at regional conferences; won IdeaCom'19 and DICE'20 and secured seed funding.

Open-Source Products

Headroom — Windows volume, preamp & EQ control (github.com/muteebm/VolBooster)

ELECTRON, REACT 19, VITE, WINDOWS CORE AUDIO, EQUALIZER APO

2026

- Tray app that pushes system volume past the Windows 100% ceiling via Equalizer APO preamp with clip detection, EQ pre-sets, per-app mixing, remappable hotkeys and an on-screen display.
- Shipped as an NSIS installer with an unattended Equalizer APO first-run flow and GitHub Releases auto-update.

Why Blame — “git blame” for your PC (github.com/muteebm/why-blame)

TYPESCRIPT, ELECTRON, REACT 19, SQLITE, ESBUILD

2026

- Background sampler records CPU/RAM per process into SQLite (48-hour window) so you can brush any past time range and see what used the machine — including processes that have since exited.
- Generates shareable reports as image or markdown straight from the tray.

Skills

AI & Agentic Systems

LLM agents, LangChain, Model Context Protocol (MCP), tool calling, structured outputs, Playwright, prompt engineering, Azure OpenAI, Gemini

Backend & APIs

Python (Flask), Node.js (Express), TypeScript, RESTful APIs, event-driven architecture, microservices (Strangler Fig)

Cloud & Infrastructure

Azure (Service Bus, App Service, OpenAI, DevOps), AWS (Amplify, EC2), GCP, Docker, CI/CD

Frontend & Desktop

React, Angular, React Native, Electron, Vite, Tailwind CSS, Three.js

Data & Practices

PostgreSQL, MongoDB, Redis, MS SQL, SQLite, Supabase; TDD (Jest, Pytest), code review, Git, Jira, team leadership

Education

FAST - National University of Computer and Emerging Sciences

Karachi, Pakistan

BACHELOR OF SCIENCE IN COMPUTER SCIENCE

August 2016 - July 2020

Achievements

IdeaCom’19

Winner of IdeaCom’19 held at FAST-NUCES Karachi campus with AAB.

TechCup’19

Winner of the database design competition in TechCup’19 held at FAST-NUCES Karachi campus.

DICE’20

Winner of the DICE shark competition for startups, successfully raised funding for AAB.
